Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

Amazon Web Services (AWS) is a cloud computing platform that provides on-demand services such as computing, storage, databases, networking and security.

An AWS account is required to access the AWS Management Console and provision cloud resources. The AWS Free Tier (or the free account offer shown during registration) allows eligible users to try selected AWS services within the applicable usage limits. Charges may apply if usage exceeds the free allowances or if paid resources are selected.

Steps:

1. Open a web browser and visit the official AWS website: https://aws.amazon.com/.

2. Select “Sign in to Console” and enter a valid email address, password and AWS account name.

3. Verify the email address using the verification code sent by AWS.

4. Enter the required contact information and choose the account type as Personal or Business, as applicable.

5. Provide the requested billing or payment information. Review the terms carefully; a payment method may be required for account verification.

6. Complete the phone or identity verification process when prompted.

7. Select the support plan offered during sign-up and complete the registration.

8. Sign in to the AWS Management Console using the root user email address.

9. Open the console and confirm that the account dashboard is accessible. Check the Free Tier or account credits/usage page to understand the applicable limits.

Output:

The AWS account registration process was completed and the AWS Management Console was accessed successfully. The account is ready to provision eligible cloud resources. The applicable Free Tier limits and billing details should be checked before launching any service.
